Date of birth: 02-Jun-1995

SUMMARY

I'm a fullstack developer with 8 years of experience in Web Development (which includes 5 years of experience in Modern Front -End Web Development and 3 years of .NET related technologies). With good knowledge Object-Oriented Analysis and Design, Architecture Design and Design Patterns.

EDUCATION

University of Science, Ho Chi Minh

Software Engineering (2013 - 2017)

TECHNICAL SKILLS

- **Programming Languages:**
 - Javascript, Go, C# .Net
- **Frameworks / Platforms:**
 - React, NextJs, Angular, NodeJS,
 - Webpack, Babel, ES6
 - ASP.NET MVC, Web API
 - Entity Framework
 - JQuery, Twitter Bootstrap
 - MUI, TailwindCSS
- **Others:**
 - Good understanding of OOP methodologies, SOLID principle, design patterns
 - Experience in setting CI/CD, Docker
- **Database Management Systems:**
 - MongoDB, MS SQL , MySQL
- **Version Control:**
 - Git, TFS, SVN

EXPERIENCE

● VNSilicon - Senior Frontend Developer

Apr 2025 - Oct 2025

Project: Agricultural Supply Chain & AI Knowledge Base (8 Members)

- **Description:** Developed an integrated agricultural platform featuring a smart logistics management system and a centralized data repository designed to support AI model training for fruit and produce analysis.
- **Technologies:** NextJs, Typescript, N8N, Go, Python
- **Responsibilities:**
 - Smart Logistics Implementation: Engineered an intelligent tracking module to monitor real-time transportation progress, optimizing the supply chain flow from farm to destination.
 - AI Data Infrastructure: Architected a scalable storage solution to digitize and manage agricultural documentation and fruit datasets.
 - Data Pipeline for AI: Structured and curated domain-specific data to create high-quality training sets for machine learning algorithms.

- System Optimization: Ensured high availability and data integrity for both the logistics tracking and document retrieval modules.

• Aperia - Senior Frontend Developer

Nov 2019 - Oct 2024

Project: *Client-360 Merchant (7 Members)*

- **Description:** The Merchant CRM project is a digital banking solution for US-based banks, designed to efficiently manage merchant information and related inquiries. This large-scale CRM automates the complete lifecycle of calls and emails for banking agents, including caller/mailer identification, automatic inquiry generation, task assignment, and real-time inquiry updates, while synchronizing data for reporting through Data Mart and PowerBI.
- **Technologies:** React Hooks, Vite, NodeJS, NextJs, Typescript, MUI, React-Query, Redux Toolkit, TailwindCSS.
- **Responsibilities:**
 - Coordinate with cross-functional teams (Product, UI/UX, Data Engineering, etc.) to understand product requirements and translate them into technical backlog items.
 - Maintain an open-minded and imaginative approach when addressing UI/UX challenges.
 - Optimized the performance and rendering of high-volume data.
 - Participate actively in UI/UX discussions and propose suitable technology solutions.
 - Contribute to development of UI components in accordance with the inhouse Design System.
 - Contribute to the design of a robust, scalable and secure architecture to support multiple software development initiatives.
 - Write clean, high-quality, maintainable code with best development practices.
 - Define a user interface (Form UI) that adapts dynamically based on the user's role and data access permissions. This Form should be designed to be reusable across multiple systems to maintain consistency and reduce development effort.
 - **Unit Testing for Frontend Components:**
 - *Tools & Frameworks:* Utilized Jest and React Testing Library to create unit tests for React components, ensuring they function as required.
 - *Debugging & Maintenance:* Supported fast bug identification and resolution, aiding maintenance and scalability as the project grew.

• NASHTECH - Senior Software Engineer

Sep 2018 - Sep 2019

Project: *Achilles ODC (7 Members)*

- **Description:** The project helps buyers find the right suppliers, manage their relationships, and enjoy increased levels of visibility and control over their entire supply chain.
- **Technologies:** *Typescript, Angular 5, Neo4j, C#, .NET Core Framework*
- **Responsibilities:**
 - Design UX/UI and implement additional functionalities (both back-end and front-end) based on the requirements from stakeholders.
 - Communicate with customers and teammates to clarify requirements.

- Participate actively in UI/UX discussions and propose suitable technology solutions.
- Identify dependencies or risks against requirements and suggest solutions to the team.
- Develop key modules of the system. Implement an input validation framework that saves around 20% of the development time of other functionalities.
- Write key technical documents and mentor new members of the team.

- **iFinancial - Software Engineer**

Nov 2017 - Aug 2018

Project : *Banking Application (5 Members)*

- **Description:** Participated in the development of a banking application. Responsibilities included creating a website for managing bank transactions, building a system for customer feedback on banking services, and generating monthly reports.
- **Technologies:** *AngularJS, jQuery, .NET MVC, SQL*
- **Responsibilities:**
 - Develop and fix the application's defects based on requirements.
 - Develop small modules of the system.
 - Prepare documents and technical guide for developers joining in the middle of the project.
 - Participate in troubleshooting and resolving issues from applications in production.

- **AS White Global - Software Engineer**

Aug 2017 - Nov 2017

Project: *Foundation - BAU (6 members)*

- **Description:** Develop and maintain an insurance application for an Australian client, handling tasks such as managing insurance claims and invoices, and writing documentation.
- **Technologies:** *AngularJS, C#, .NET MVC, SQL, Rest API*
- **Responsibilities:**
 - Communicate with customers and teammates to clarify requirements
 - Develop key modules of the system.
 - Implement an input validation framework that saved around 20% of the development time of other functionalities
 - Write key technical documents and mentor new members of the team

PASTIMES AND ACTIVITIES

- **Blogs App:** Simple Application using NodeJS for backend, NextJS, MUI for the frontend, Typescript for both the frontend and backend, and MongoDB for database, this project will help you become familiar with these technologies and provide an overview of how to integrate them.
- **GitHub:** <https://github.com/PinNguyen9x>
